Trisha A. Morgan

From: Louis OBryan [REDACTED]
Sent: Tuesday, June 11, 2013 10:33 AM
To: Stump-Web
Subject: Protect Net Metering in Arizona

Dear Commissioner:

I am an Arizona utility customer, and I am writing to urge you to protect net metering.

Net metering is the policy that makes sure solar customers get fair credit for the valuable clean power they deliver to the grid for others to use. Utilities are using fuzzy math to make the case that Arizona should change its successful net metering policy. I am highly concerned that the utilities are threatening to stop properly compensating net metered customers for their valuable energy investment.

When Arizona homes and businesses go solar, all utility customers benefit. In fact, a recent study found that because of net metering, APS customers alone will receive \$34 million in grid benefits each year starting in 2015. These benefits include saving on expensive conventional power generation and grid infrastructure as well as reducing electricity lost during long-distance transportation over power lines. Rooftop solar power also delivers tremendous economic, energy independence and public health benefits to our state.

Arizona voters know that more rooftop solar power is the right direction for our state. Poll after poll shows that, regardless of political orientation, a supermajority of Arizonans support continued solar development.

I urge you to be a solar energy champion by protecting net metering.

Subject: [Filter Test: C13] Protect Net Metering in Arizona

Dear Commissioner:

As an Arizona utility customer, I urge you to protect net metering to ensure that customers with solar receive fair credit for the valuable clean power they deliver to the grid for others to use. The current policy is acceptable and fair, but utilities seem to be fudging the numbers to make a fallacious case we need to change it. We customers make serious investments in our solar installations. The utilities must, without question, fairly compensate us for the receipt of that energy - which they then resell to others. Anything else amounts to a customer subsidy for the for-profit utilities.

When we go solar everyone in Arizona benefits. Not only are we cleaning up the atmosphere, we are helping to provide jobs in a business sector that Arizona should dominate but, as yet, does not. We reduce grid costs and the costs for dirty conventional power sources. Each year, because of net metering, APS customers alone will receive \$34 million in grid benefits each year starting in 2015. Rooftop solar power also delivers tremendous economic, energy independence and public health benefits to our state.

Arizona voters know that more rooftop solar power is the right direction for our state. Poll after poll shows that, regardless of political orientation, a supermajority of Arizonans support continued solar development.

Dear Commissioner:

I am an Arizona utility customer and residential solar owner, and I am writing to urge you to protect net metering. I make two points.

First, even if you are not an "out there" champion of solar energy, at least, please, do not get in the way of alternative energy development in AZ.

Second, I know you get lots of such mail - but the arguments in favor of net metering below are worth repeating.

Net metering is the policy that makes sure solar customers get fair credit for the valuable clean power they deliver to the grid for others to use. Utilities are using fuzzy math to make the case that Arizona should change its successful net metering policy. I am highly concerned that the utilities are threatening to stop properly compensating net metered customers for their valuable energy investment.

When Arizona homes and businesses go solar, all utility customers benefit. In fact, a recent study found that because of net metering, APS customers alone will receive \$34 million in grid benefits each year starting in 2015. These benefits include saving on expensive conventional power generation and grid infrastructure as well as reducing electricity lost during long-distance transportation over power lines. Rooftop solar power also delivers tremendous economic, energy independence and public health benefits to our state.

Arizona voters know that more rooftop solar power is the right direction for our state. Poll after poll shows that, regardless of political orientation, a supermajority of Arizonans support continued solar development.

I urge you to be a solar energy champion by protecting net metering.

Thanks for your attention.
